No Jump Harness

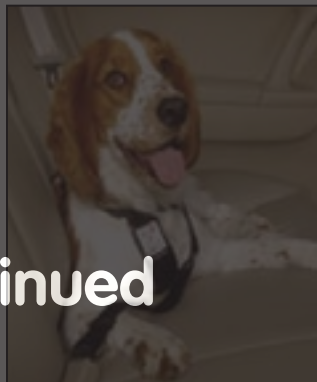

Dogs can stand on their hind legs, but they can not jump. In this day and age of electronic and ultrasonic training, here's a simple training harness that works! Allows problem jumpers to train themselves by restricting the flexing of rear legs. Adjustable straps allow fitting the harness to most breeds. Available in black only.

HR021	'No Jump' Harness	\$10.95

Vehicle Seat Belt Harness

The two piece design is unique and allows you to put the harness on outside and then easily secure your dog in the car to the strap. The center-padded harness uses a "step-in" system: lay it on the ground, the dog steps in, it's that simple. Doubles as a training harness. Metal clips & D-rings offer exceptional strength. Available in black only.

"Lupi" No Pull Harness

The Lupi is a universal harness that is specially designed to prevent the dog from straining against the lead while being walked. As the dog pulls, forward motion is converted into an upward lift around the thorax.

No fuss, no muss, dog simply stops pulling. Suitable for all dogs.
